

Kian Naquines

● Open to Work

Full-Stack Engineer · Backend + AI Workflows

📍 Makilala, Cotabato, PH

🕒 Asia/Manila

I build scalable backend APIs, data-driven systems, and AI-assisted product workflows. My recent work spans FastAPI services, relational database design, background workers, cloud deployment, and production machine learning features.

Selected product and systems work

Distributed Background Job Scheduler

Fault-tolerant scheduler on Google Cloud Platform using Cloud Run, Cloud SQL, and worker pools, with horizontal scaling and proactive monitoring for operational resilience.

GCP Cloud Run GCP Cloud SQL Worker Pools Prometheus CI/CD

Human Resource Information System

Scalable HRIS for employee lifecycle management, payroll processing, and workforce analytics, built to improve operational efficiency and data visibility.

Laravel Inertia.js MySQL DDD RESTful APIs

Crowd Monitoring with AI

Visit

Real-time crowd monitoring system using Wi-Fi probe request signals and AI-based inference models for population estimation and analytics in dynamic environments.

TypeScript React FastAPI MQTT Docker ML

Web Application Firewall

Visit

AI-driven WAF for adaptive threat detection and mitigation, using intelligent traffic analysis to strengthen application-layer security.

Python Scikit-learn Pandas Jupyter

Feed Formulation Optimizer

Visit

Optimization engine that uses linear programming to improve poultry feed nutritional efficiency and reduce resource waste through mathematical decision models.

Python Linear Programming Optimization

Open-Source Systems

Visit

Maintained 100+ public GitHub projects focused on reusable architectures, clean abstractions, developer tooling, full-stack development, applied AI, and enterprise-grade system design.

Software Engineer · FastAPI, MySQL, Celery, Redis

Scaled a production FastAPI backend with REST endpoints for authentication, file processing, text classification, Gemini LLM integration, Celery workers, Redis-backed locking, and pytest coverage.

University of Southern Mindanao

08/2025 - 03/2026

Full Stack Developer · Laravel, Inertia.js, Shadcn UI

Built university-wide production systems using Domain-Driven Design, bounded contexts, repository patterns, secure APIs, query optimization, and documentation workflows across GitHub and Notion.
